## **Predictive Services Discussion:**

Hot and dry conditions will continue across the Southwest and greater Four Corners, but slightly cooler temperatures are forecast across the southern Plains into the Lower Mississippi Valley behind a weak cold front, while drier post-frontal conditions are likely across the Deep South. Isolated to scattered mixed wet and dry thunderstorms will develop near the front from the New Mexico central mountain chain into central Texas and the Texas Gulf Coast. Above normal temperatures are forecast across the remainder of the West, especially the Northwest where temperatures will be 10-15 degrees above normal amid minimum relative humidity of 10-30%. Isolated to scattered mixed wet and dry thunderstorms are likely to develop from central California into central Nevada and central Utah, and from northeast Oregon through central Idaho into southern Montana and Wyoming. Scattered to widespread thunderstorms will develop from the Southeast through the Appalachians into the Northeast, with dry but seasonable conditions in the Midwest.
